Custom Progressive	N/A	\$150 – \$175

¹Prices shown reflect the standard plastic price for each respective category. Premium lens enhancement prices may vary. Prices are valid only through VSP Choice Providers and are subject to change without notice.

Solid Tints and Dyes

Solid color tints and dyes are not only fashionable, they also reduce the amount of light coming through the lenses.

Plastic Gradient Dyes

Gradient dyes are usually dark at the top and gradually lighten toward the bottom of the lenses.

UV Protection

The combination of UV protection that's built into lenses and applied as a coating can block 98% – 100% of transmitted and reflected UVA and UVB rays.

Scratch-resistant Coating

Scratch-resistant coatings can be applied to plastic lenses to increase their resistance to normal scratching and pitting. The result is longer-lasting, clearer lenses.

Polycarbonate Lenses

Polycarbonate lenses are one of the thinnest, lightest, and most impact-resistant materials available. Plus, they provide UV protection and scratch resistance.

Anti-reflective Coating

Anti-reflective coating can reduce eyestrain caused from glare, reflections, and the "halos" you see around lights at night. Plus, it helps protect your lenses from scratches and smudges, and can repel dust and water.

Photochromic Lenses

Photochromic lenses automatically darken when exposed to sunlight and lighten when out of sunlight.

Progressive Lenses

Unlike traditional bifocal and trifocal lenses that have lines, progressive lenses are line-free. Also, the power gradually changes with distance.
